

VMI Hybrid 2

Quick, clean, quiet and very effective

Details

It combines the traditional polishing approach with patented heat technology, resulting in repairs that are very quick, low cost, clean – and most important of all, effective.

Each repair on the machine is completely automated – simply close the lid and the repair starts. The repairs are extremely clean with only a very light residue to wipe from the disc.

Small and compact, this unit is designed for use at the front counter. Due to the unique repair process, the VMI Hybrid runs very quietly.

The machine features an electronic chip which ensures every disc is repaired to a consistently high standard. Furthermore, an indicator on the front of the machine displays how much life is left in each set of consumables, so you'll never be caught short again.

The VMI Hybrid is truly next generation, combining clean, quick and low cost disc repair with the ability to remove deep scratches.

All our new machines...
